The 2015 Sustainable Agriculture Symposium is the ICSA's biggest annual event with an estimated 300-600 attendees. The Symposium will include a keynote speaker, along with multiple breakout sessions facilitated by recognized thought leaders. In addition, it attracts agriculture extension educators and local farming experts. The day (Friday) will be filled with information packed workshops and seminars, in addition to a vendor expo in the lobby of our venue. Workshop topics will include soil health, bee keeping (pollination), alternatives to pesticides, cover cropping, sustainable gardening, regenerative agriculture, holistic livestock management, water conservation, water pollution, no-till farming, permaculture, and backyard and pastured poultry. It's a great attractor event for the environmentally conscious shopper too!
